

FIXXUS SOLUTIONS

FIXXUS Solutions

Superior's Food Safety Coatings Division (Fixxus) is the only innovative specialty coatings contractor with a patented system designed for USDA/FDA food beverage compliant applications of Polyurea within the United States. It is a composition made by a process in which layers are applied to the inner surfaces of food, beverage, and pharmaceutical facilities resulting in a new surface that is highly impervious barrier to moisture. The application of the Fixxus system; furthermore, ensures to mitigate the harborage of pathogens, including listeria and E. coli on walls and ceilings, proving long term solutions in very harsh environments, while still proving an aesthetically appealing illuminating surface. This process has established Superior as the premier and most sought out company in the application (spraying) of Polyurea in the United States.

Innovation

Partnering with Superior Industrial Maintenance and FIXXUS Solution provides clients with a unique solution that is reasonably priced.

Quality

Producing quality work, keeping costs down, and minimizing shut-down time is our goal. Superior Industrial Maintenance and FIXXUS Solution strives to provide craftsmanship that is above industry standards.

Safety
