

FIXXUS INSULATED METAL PANELS

FIXXUS Insulated Metal Panels

Food & Beverage facilities experience flaking of paint of existing metal panels. Most opt to scrape and re-paint the panels. However, the continuous frequent day-to-day cleaning using extremely hot water and harsh chemicals that emulsify grease and kill bacteria deteriorate the newly painted finishes of these surfaces quickly. This will result in hanging plastic or replacing the panels, which is the only way USD|FDA inspectors will allow to continue production. This in turn becomes a liability, which can cost valuable production time and money.

Product Information

- Return to service immediately upon completion.
- Concrete repair in accordance with ICIR and ACI standards.
- Seamless and Monolithic
- The process is temperature and moisture tolerant.
- Damaged panels not a problem; Our SISTER Panel method provides an aesthetically appealing new look

Advantages

- Eliminates liability for product adulteration from flaking paint.
- Reduces sanitation costs (water, chemicals, and energy).
- Protects assets (eliminates corrosion).
- Provides lower add-on costs (no moving electrical equipment or re-routing piping).
- Best warranty protection on the market.
